

PP熔喷滤芯由纯聚丙烯经热熔喷丝一次成型制成，适合对高洁净度液体进行深层粗过滤，通常用作精密膜过滤的保安过滤。

PP Melt Blown Filter Cartridge is made of pure polypropylene by hot melt spinning and it is suitable for deep coarse filtration of high cleanliness liquids. It is usually used as a security filter for precision membrane filtration.

## 特征

- 过滤器的构造由PP聚丙烯热成型体三层构造组成，与单层品相比，过滤寿命大幅度提高。因此，过滤器的维持经费可以得到大量消减。
- 使用以PP纤维理想的热着方式，大大减小过滤抵抗力，过滤流量增大。
- 纤维间空隙均匀，使过滤效果可以得到尽可能的发挥。
- 产品只使用聚丙烯材料，所以从有机溶剂到无机溶剂耐药品性都非常强。

## Characteristic

- The structure of the filter consists of a three-layer structure of PP polypropylene thermoformed body, which compared with the single layer product and the filtration life is greatly improved. Therefore, the maintenance cost of the filter can be greatly reduced.
- Characteristic hot melt spinning could greatly reduce the filtration resistance and increase filtration flow .
- The gap between the fibers is uniform, so that the filter effect can be exerted as much as possible.
- The product uses only polypropylene materials, so the chemical resistance from organic solvents to inorganic solvents is very strong.

## 用途

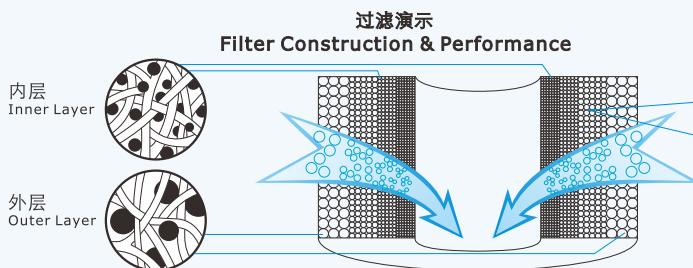

- 电子产品的镀液，浊刻液，药液，净水的过滤。
- 各类精密过滤的预过滤。
- 化学工业领域的药剂，溶剂的过滤和水处理。
- 酿造业，饮料业制造过程中的过滤。
- RO.UF前的预先过滤，工业用的各种水处理。

## Application

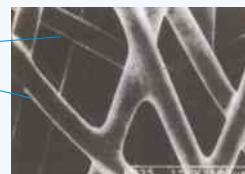

- Electronics plating solution, turbidity solution, liquid solution, filtration of purified water.
- Various types of precision filtered pre-filter.
- Pharmaceuticals in the chemical industry, solvent filtration and water treatment.
- Brewing industry, filtration in the beverage industry manufacturing process.
- Pre-filtering before RO.UF, industrial water treatment.
